

Spring 2009

MASON GREENSTAR INC

Spring Workshop May 26th - 30th, 2009

Mason Greenstar and Traditional Building Models and Systems, LLC will be hosting a 5 day workshop seminar. This seminar will consist for a series of hands on workshops focusing on breathable wall coverings for the GREENSTAR BLOX™. The construction materials used during the seminar consist of products that contain over 65% post-consumer and post-industrial waste products. If you are interested in Sustainable building for the 21st Century you cannot afford to miss this one-of-a-kind workshop seminar. Below are the contact information and a brief description of the products and workshop series.

Roman Stucco

Traditional Building Models and Systems, LLC

Tim White , President

PRODUCT DESCRIPTION: Roman Stucco is a unique blend of Hydrated Calcium Hydroxide (Lime) and Pozzolans. The Lime-Pozzolan material creates a cementitious set, similar to NHL, but maintains a greater workability and all the benefits associated with lime stuccos.

FEATURES

- Carbon Neutral -Absorbs CO₂
- 100% Natural, Non-Toxic & No VOC's
- Low Thermal Conductivity
- Breathable Stucco
- Mold Resistance

Costs

- *Engineering/ Architectural/ Construction Design details.*
- *Experience a hands-on demonstration.*
- *Learn and practice masonry skills with MGS products*

In the past decade many builders have taken another look at lime as a building material. Lime has been used for millennia, but in the 1800's it was replaced by portland cement as the main

May 29th and 30th Friday and Saturday

American Clay Advanced Applicator Training

If you have been looking into becoming an Artisan/Applicator of American Clay's Earth plaster products don't miss this opportunity.

This Two day Advanced Applicator training will

binding materials in construction.

When installed properly, lime stuccos can last for hundreds of years and require little or no maintenance. To ensure proper placement and protection of lime stuccos, applicators should have training to understand the material and how it works.

The lime section of this training seminar is designed to expand your knowledge of what it takes to successfully install lime stucco. Topics include: Sand gradation and particle size and how they can effect stucco strength; what a Balance Mix is; mixing, applying and compressing finish coat lime plasters and applying colored limewash. This is a hands-on workshop, and participants must bring protective equipment for eyes, hands, and body, a hawk and trowel; and a desire to learn.

cover everything you need to know about applying American Clay's Earth plasters. You will also get a certificate of completion from a certified American Clay instructor (Tim White) upon completion for this course. This certificate along with applying 1000 sqft of American Clay plaster and sending American Clay a client reference is the easiest way to get listed on American Clay's web site as an Artisan/Applicator.
